If the compression line of the offending end is above that of the other end, it proves that its discharge valves are leaking back, and if the line is below, the fault is with the suction valves. In plotting adiabatic curves on diagrams, Mr. Voorhees, in his useful little book, Indicating the Refrigerating Machine, has given us a set of constants for various back pressures. I make the following suggestion, which I believe to be an improvement in practical accuracy and ease of working--its theoretical accuracy I cannot vouch for. An examination of Mr. Voorhees s tables reveals to you that all of his numbers in any one column bear the same ratio to the first as any other corresponding number does to the first of its column. I give a list of these ratios in Table II. They are...
