For the study dataset, where not be computed for this site for the period 1976 - 83 because at least monthly samples were available for the entire period of insufficient data to run the LOADEST model. Because (1976 - 2004), the best model selected by LOADEST was concentration and instantaneous load data for sediment were used for load calculations for both stations on the Haw and not available for almost 20 years, only flow was selected as the Deep Rivers. Calendar year loads for 2002 and 2003 were predictor variable (model 1, table 4) for estimating sediment estimated based on the calibration period September 2002 loads. Sufficient sediment data were available (25 samples) through August 2004. The equations used to estimate loads are to estimate loads generated from a model calibrated for the presented in Appendix 4. period 1976 - 83 for comparison...
